

Trending Technologies: Analysis of Stack Overflow Developer Survey 2019

Erdem Erden

8 July 2024

OUTLINE

- Executive Summary
- Introduction
- Methodology
- Results
 - Visualization – Charts
 - Dashboard
- Discussion
 - Findings & Implications
- Conclusion
- Appendix

EXECUTIVE SUMMARY

- Analysis Goal: Aims to understand the developer ecosystem
- Methodology
 - Data Gathering & Analysis
 - Data Visualizations
- Key Findings
 - Top Programming Languages & Databases in Demand
 - Popular Platforms and Web Frameworks
 - Future Technology Trends
- Discussion and Implications
- Conclusion

INTRODUCTION

- Stack Overflow's annual Developer Survey is the most extensive and detailed survey of programmers
- 2019 marks the 9th consecutive year of publication, with nearly 90,000 developers participating, ***sharing how they learn and level up, which tools they're using, and what they want***
- The survey provides insights into the evolving landscape of programming languages, web frameworks, and developer demographics
- It covers a wide array of topics, from preferred technologies to career aspirations
 - The results help predict trends and characterize developers globally
 - While the results do not represent everyone in the developer community evenly, they offer valuable insights into key trends in programming and technology

METHODOLOGY

- Data Gathering
 - Developer Surveys conducted by 2019 Stack Overflow
 - Involved nearly 90.000 software developers from different countries
- Data Analysis
 - Became proficient with the dataset through completion of IBM labs on Coursera, covering Web Scraping, Dataset Exploration, Data Wrangling and Exploratory Data Analysis
- Data Visualization
 - Utilized IBM Cognos Analytics & Google Looker Studio for data visualization

RESULTS

- **Programming Languages:** JavaScript remains the most used (70%), with Python (42%) surpassing Java. Python continues to grow rapidly
- **Web Frameworks:** jQuery is the most used web framework (50%). React.js has overtaken Angular in popularity this year
- **Databases:** MySQL is the most used database (54%), followed by PostgreSQL (34%), which edged out Microsoft SQL Server
- **Platforms:** Linux and Windows are the top development platforms. Docker is the third most used platform, newly included this year
- **Technology Preferences:** Rust is the most loved language, with Python close behind. VBA and Objective-C are the most dreaded. Python is the most wanted language for the third year

PROGRAMMING LANGUAGE TRENDS

LanguageDesireNextYear

PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

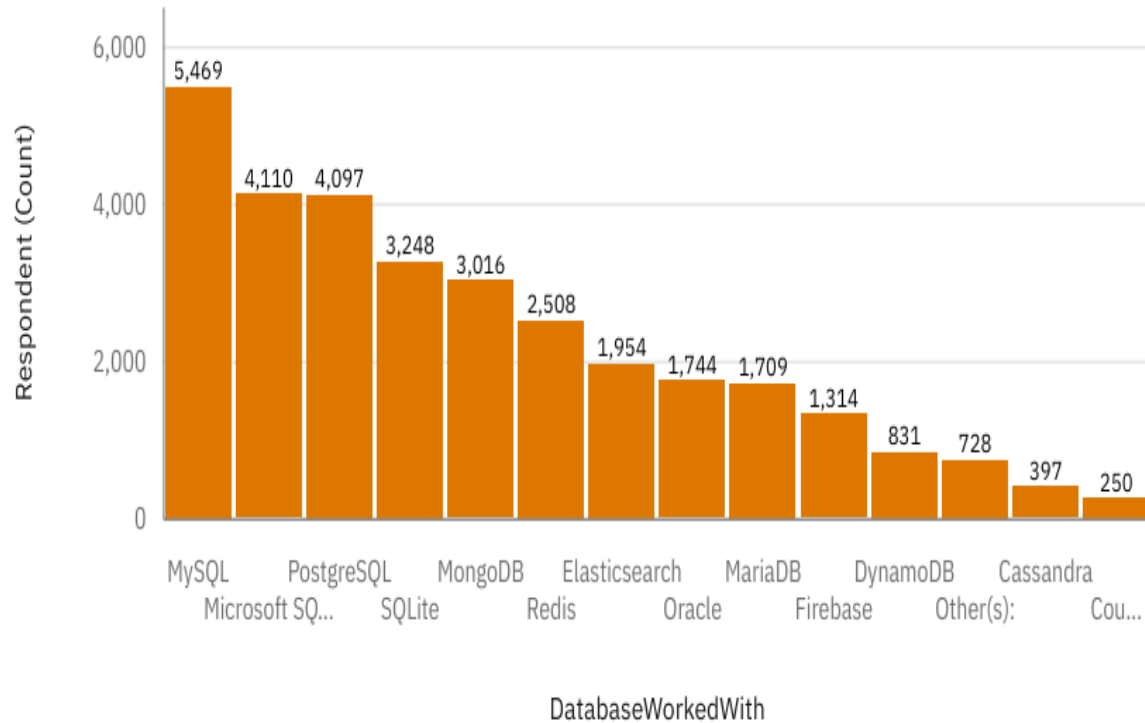

Implications

- Developers should prioritize JavaScript, HTML/CSS, and SQL to align with current industry demands
- Learning Python is crucial due to its rapid growth and increasing popularity in various fields
- Keeping an eye on emerging languages like TypeScript and Bash can provide a competitive edge in future developments

DATABASE TRENDS

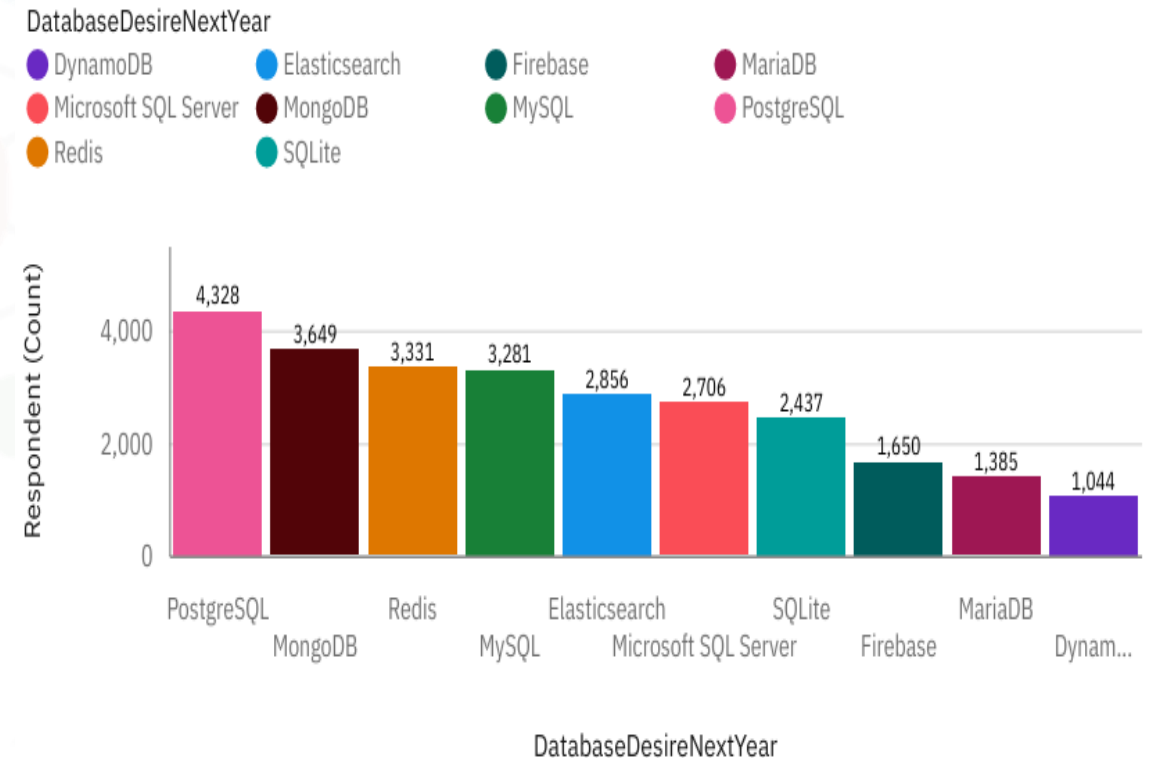

2019

Top 10 Database Worked With

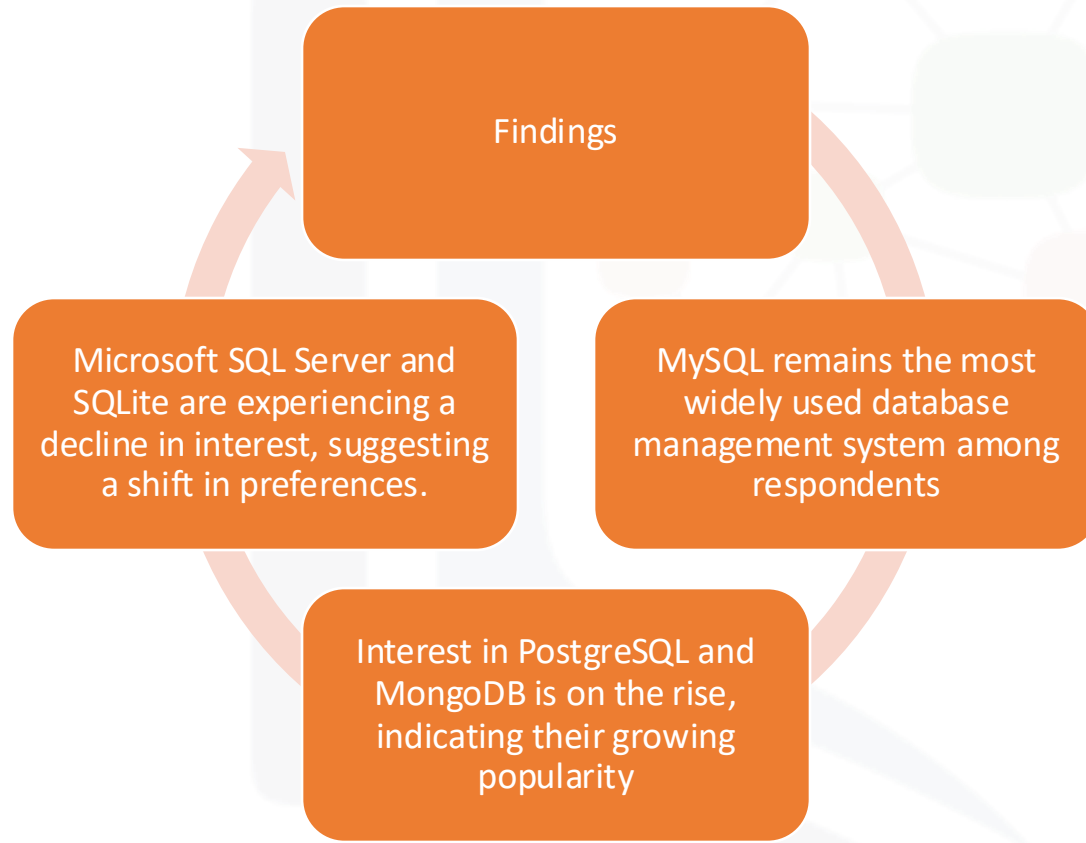

Next Year

Top 10 Database Desire Next Year

DATABASE TRENDS - FINDINGS & IMPLICATIONS

Implications

- The declining interest in Microsoft SQL Server and SQLite signals a shift in market dynamics, favoring alternative database solutions
- The increasing adoption of PostgreSQL and MongoDB reflects their growing stature and acceptance within the developer community
- Keeping abreast of emerging trends is crucial for developers seeking employment opportunities in the evolving technology landscape

DISCUSSION

OVERALL FINDINGS & IMPLICATIONS

Implications

- Developers should prioritize learning Python and TypeScript to align with current industry trends and job market demands
- Organizations should consider adopting PostgreSQL and MongoDB for future projects due to their increasing popularity and developer preference
- The decline in interest in Microsoft SQL Server and SQLite indicates a shift in technology adoption and developer preferences, prompting organizations to reassess their database strategy

CONCLUSION

- The survey shows how technology is constantly changing, which is important for driving new ideas in many industries
- Developers need to understand different programming languages and databases well to succeed in their software projects today
- The survey also highlights how popular different tools and technologies are, and suggests there's a need to make more opportunities available for developers worldwide
